

Creating your new dream kitchen.

To start you will require the following: Tape measure, pen and paper.

Step 1: Draw the outline shape of your kitchen including windows, doors, nib walls & bulkheads on the grid paper provided.

Step 2: Measure the total length of each wall.

Step 3: Measure the width of each window. Very importantly, make a note of the height of the window from the floor.

Step 4: Measure the distance to the left of the window and to the right.

Step 5: Measure the width of each doorway.

Step 6: Measure the distance to the left of the doorway and to the right.

Step 7: Measure the floor to ceiling height. Do you want your tall and overhead cabinets to go all the way to the ceiling? If you want your new cabinets to meet the ceiling, will you be corncicing once installed. Please make note of current corncice height.

Step 8: Measure the distance from the centre of your sink and oven/cook top to the wall on the left or right hand side. Measure and mark where your water supply comes in and very importantly, where the waste is. If the waste pipe goes out of the wall or goes straight into the floor, you will need to know, especially if you are going to include a dishwasher.
